"Be the change that you want to see in the world."

About Me

I come from a background in education,where I was able to develop my leadership, communication, and organizational skills. However, I have always been interested in development and I am now looking to establish a career in the industry. This interest has led me to recently graduate from a coding Traineeship as a full stack developer which includes, completing 2 real-world projects successfully to specification using a wide range of programming languages. I am a hardworking and loyal employee with excellent problem-solving skills and a drive to succeed. I am confident that I will make a valuable addition to your development team.

Traineeship Overview

I learned a plethora of current coding languages, notably, HTML5, CSS, JavaScript, PHP, Python & SQL. At the end of the course, I was tasked with creating two applications to showcase my skills.

Portfolio Project #1: Gazetteer The specification was to reply to a website specification for a map-based app to provide information on countries – with a focus on a ``mobile-first" development. Preferably using a framework, to then develop HTML, CSS, and JavaScript with JQuery modules that use PHP server-based components to source data from third-party APIs (Geonames, OpenWeather). The solution is assessed on its delivery to specification, functionality, and usability.

Portfolio Project #2: Company Directory A more rigorous reply to this specification was required as a user requirements document was needed to be prepared which, when signed off, triggers the release of SQL allowing to develop a ``mobile-first" application to maintain a company personnel database (MySQL). Sign off is only achieved upon the student supplying an independently witnessed document providing confirmation of the system's ability to perform error-free.

Why Me?

I transitioned to a career in web development, independently designing, developing, and deploying two full-scale websites. I handled the entire process from concept to completion, including frontend and backend development, leveraging IT and computer science principles. Through this, I demonstrated my ability to quickly learn new technologies and frameworks, adapting to diverse challenges. These projects, hosted on my portfolio, effectively showcase my technical proficiency, problem-solving skills, and adaptability in a fast-paced environment.

Sincerely,

Ramona Menezes
